# WALLPANEL

The world of maintenance-free waterproof wall panels from Fibro-Trespo AS

Design your bathroms walls with high quality wallpanel from Fibro-Trespo AS. The panels are approved according to Norwegian plumbing directory and makes the work involving plaster, membrane and tiles redundant.

Laminate are pressed and hardened onto the panel and forms a watherproof surface. The panel are then milled with a 1.8 or 3.2 mm "groove" which gives the impression of tile. We also deliver panel without milling.

Combine our differendt collections of panels to suite your style.

The panels are large; 600 cm x 2400 mm. Follow the fitting instruction and you are guaranteed a great result that will last.

The panels may be mounted directly on the stud or on existing walls. The smooth and strong surface can withstand both direct water and large temperature fluctuations, is easy to clean and low maintenance. All panels are delivered with the unique Aqua Lock system.

We have divided our collection into 6 groups by design and appearance and named them: Marcato, Fortissimo, Crescendo, Legato, Adagio and Colour collection.

# MARCATO ATHEN WHITE OG RHODOS WHITE

Our white decors in the Marcato collection comes in a large selection of tile sizes. In addition to those presented in the preceding pages, we have tile sizes who are presented below. They all have 1.8mm white groove.

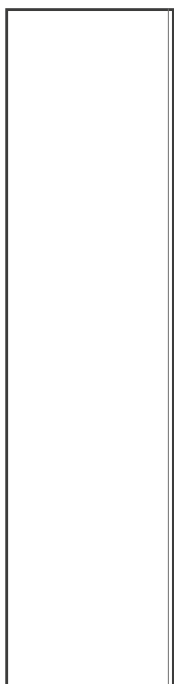

Marcato collection contains white panels with white grout. The collection consists of two surfaces; 1091 Rhodes White silk surface and 5091 Athens White high gloss finish.

Both surfaces coming with 10 different tile sizes from 600x2400mm to 30x30mm.

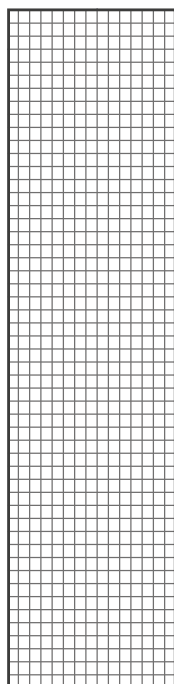

Do not let the thought of cleaning the white grout haunt you - we have the best solution for you!

The design and easy maintenance of our panels will keep the joints white for years to come.

# FORTISSIMO

Fortissimo-collection comes in a variety of colors, surfaces and milling pattern. Laminate are pressed and hardened onto the panel and forms a watherproof surface. The panel are milled with a 3.2 mm "groove" which gives the impression of tile.

The majority of Fortissimo panels have the same tile groove, color and size, between the tiles and can therefore be combined just as you like. The exception is 2520 Ivory F23, 2586 Santiago F22 and 2506 Toscana F23 who have a narrower gap between the "tiles" than the rest of the Fortissimo range.

Forkortelser:

HG = High Gloss

G = Gloss, S = Silk

SL = Slate

FW = Fresh Wood (rough surface)

PI = Matt surface with high gloss pattern

## HEAVEN AND SEA

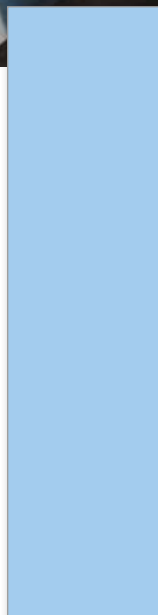

In the earlier days blue was an expensive color to produce. Only kings and very wealthy people could afford blue colored clothings or paint. Hence the term "royal blue". It was normal to be portrayed wearing blue even if you did not own any blue clothings.

## WEALTH AND OPTIMISM

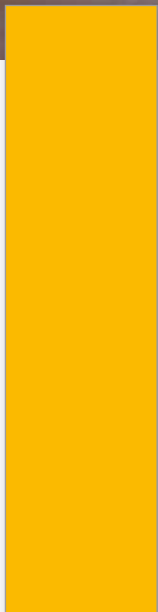

Yellow, in the form of yellow ochre pigment made from clay, was one of the first colors used in prehistoric cave art. The cave of Lascaux has an image of a horse colored with yellow estimated to be 17,300 years old.

Yellow is valued because of its high visibility. It has replaced red as the color of emergency vehicles, and is popular in neon signs, especially in Las Vegas and China.

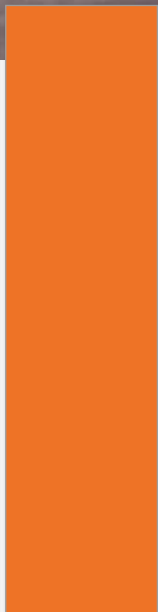

Yellow is commonly associated with gold, wealth, sunshine, reason, happiness, optimism and pleasure, but also with envy, jealousy and betrayal.

## PURPLE

Purple was one of the first colors used in pre-historic art. They used sticks of manganese and hematite powder to draw and paint animals and the outlines of their own hands on the walls of their caves. These works have been dated to between 16,000 and 25,000 BC.

In 15th century BC the process of making the purple and red dye was long, difficult and expensive. Purple became the color of kings, nobles, priests and magistrates.

Purple and red colors have through the years been associated with extravagance and individualism. It is often used to attract attention.

## SAND AND EARTH

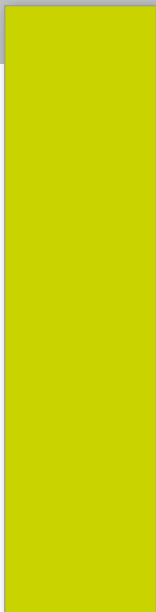

The first recorded use of beige as a color name in English was in 1887. Beige ranging from bright to deep tones in a combination of yellow, red and brown.

The light beige tones providing tranquility and peace, the deeper tones contrasts we need, both in the interior and in life as such. The tones are associated with beaches, hot coffee, spices, and gives the interior an oriental touch.

1237 HG Grass  
NCS S 3560-G

## GRASS AND NATURE

The modern English word green comes from the Middle English and Anglo-Saxon word grene, from the same Germanic root as the words "grass" and "grow".

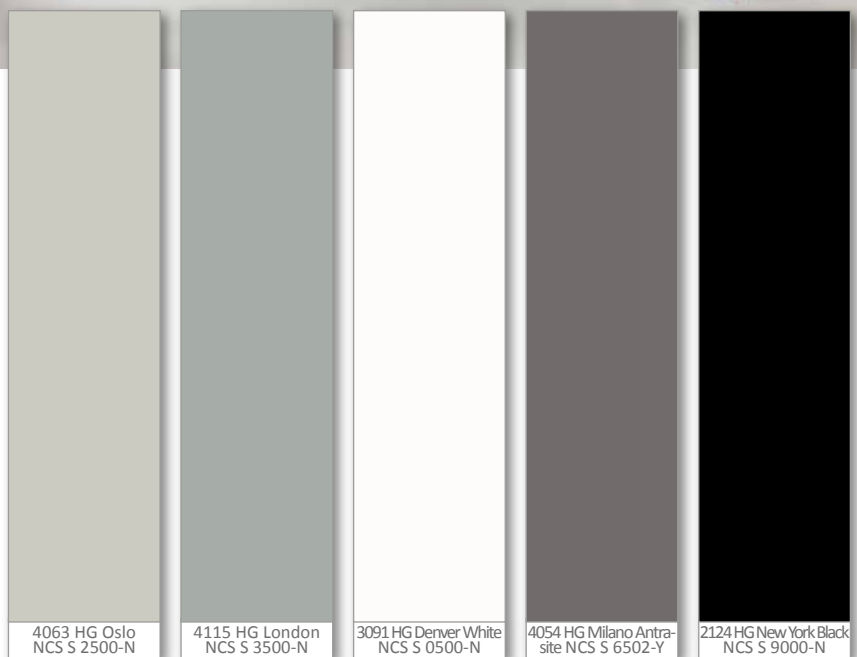

Green colors are most commonly associated with nature, youth, spring, hope, envy and a symbol of fertility.

## GRAY MINIMALISM

Use the walls as a neutral canvas to accentuate furniture and other details in the room.

Grays was previously used by the great artists to highlight their talent instead of many and bright colors that easily hides errors in a painting.

## EXTRA MATT SURFACE 1,8 MM JOINT WIDTH

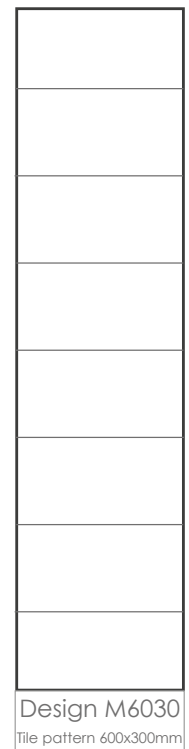

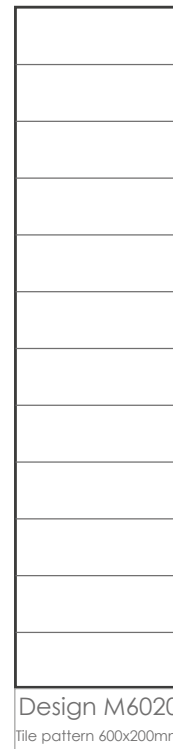

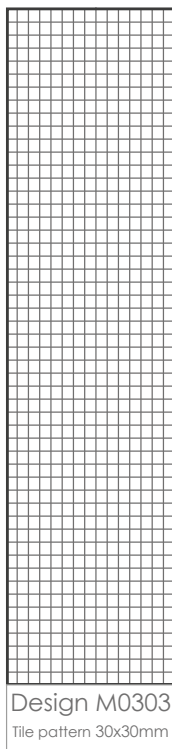

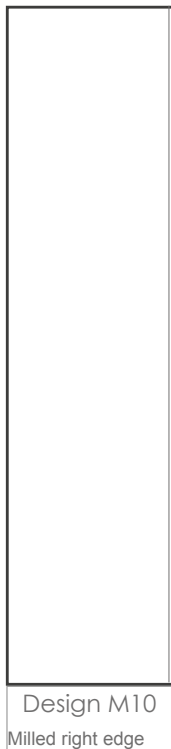

With gorgeous extra matt surface, gives the room you peace and sense of wellbeing.

An entire collection- from morning to evening.

The whole new extra matt Color Collection comes with white grout- matching perfectly 1091 S Rhodes White which comes in a variety fresemønstere.

Aluminium lists are delivered predrilled, grooved and individually plastic wrapped. \* profiles also delivered in 3000 mm

# MOUNTING

## NORWEGIAN REGULATIONS

with 2-piece internal corner profile or standard internal corner profile.  
Wallpanel with Aqualock.

In the wet zone, all profiles, cut surfaces, joints and drip noses, **MUST** be cleaned and have sealant applied. Fibo-Wipes is only to be used on laminate surfaces.

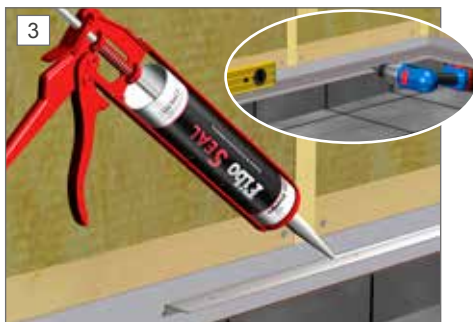

Fibo Seal is recommended as a sealant. It is approved by the norwegian building research institute (nbi) and in accordance with etag 022.

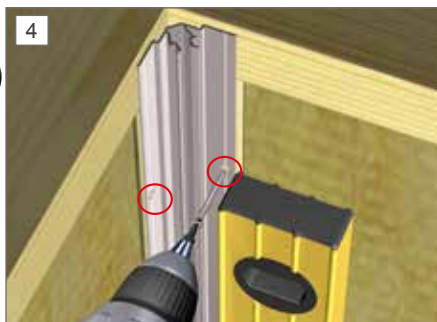

The panels can be mounted on existing walls or on a levelled timber frame with a centre to centre distance of 600 mm and horizontal battens at 800 mm centres. **NB!** When attaching heavy items such as washbasins, there must be additional studding. **NB!** Acclimatisation! The panels **MUST** be stored flat at room temperature for 3 days prior to being used (longer if they have been kept in cold storage).

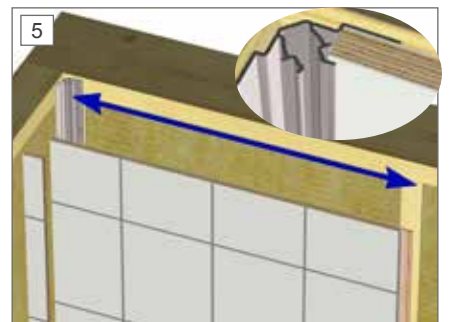

Where there is a requirement/need for a solid wall behind the panel, a minimum 12 - 15 mm x 18 mm plywood or rough panels should be used. Using a solid wall is an ideal solution for the installation of our 300 mm effect panels.

Mount the base profile about 60 - 80 mm from the floor, apply sealant to the lower back of the profile, and screw it to the wall. See also section 18. Applies to both installation with standard and 2-piece internal corner profile. Use a spirit level / laser to ensure that the profile is level.

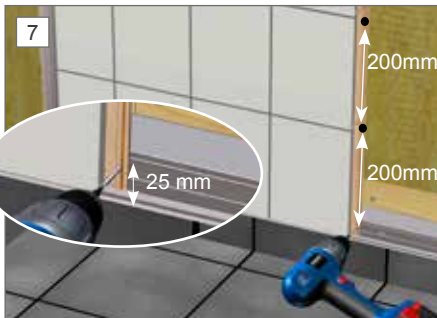

All installation must be performed from left to right. Reinforcement strip to be screwed in both drip grooves. For installation of wall base trim see section 2

Measure the top and bottom of the first panel, (remember to measure into the profile and to the first studs). Cut the panel and test fit without sealant. **NB!** The panel **MUST** be plumb/ level. Clean cut surfaces, joint edge and under drip nose.

Apply approved sealant on the cut surfaces as shown in the drawing.

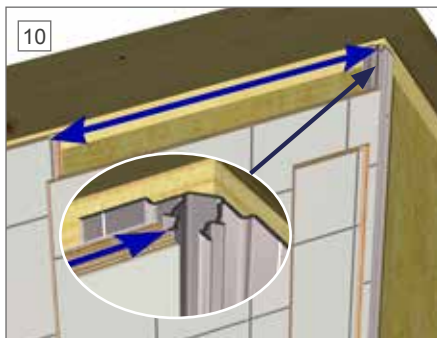

The panel is screwed to the stud as shown in the drawing.

Clean the joint edge and apply sealant on the joint edge and cut surface, prior to clicking it into place.

**NB** There should be so much sealant in the joint that the sealant oozes out along the length of the entire joint:  
1. Spray Fibo Clean on the excess sealant  
2. Remove with Fibo Fug  
3. Wipe away any visible sealant residue with Fibo Wipes

Take precise measurements, as shown in the drawing, but remove 1 - 2 mm. Test-fit without sealant.

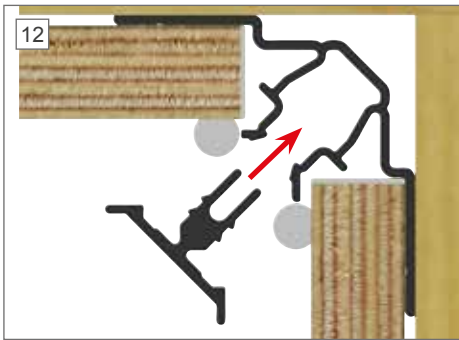

Then fit the panel, by clicking it into place.

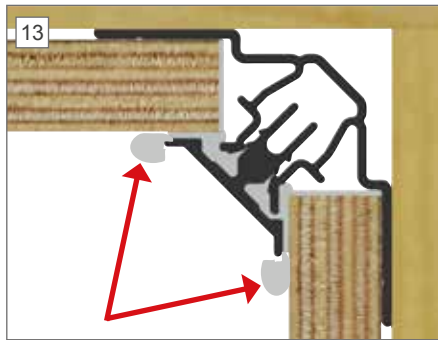

# MOUNTING

## NORWEGIAN REGULATIONS

with 2-piece internal corner profile or standard internal corner profile.  
Wallpanel with Aqualock.

If there is a gap between the panel edge and inner section of the internal profile, this must also be filled with sealant. Apply an approximate 5 mm thick amount of Fibo Seal from the bottom to the top of the sheets on both sides about 4 - 5 mm out from the corner. 2nd cover part of the internal profile to be inserted from the bottom of the panel and slid into the 1st part inner profile. If needed use a tapping block, (tap carefully).

The sealant should ooze out along the entire length of the profile. Excess sealant can be removed with Fibo Clean and a sealing tool.

In order to be approved in accordance with Våtromsnormen (the Norwegian trade norm for wet rooms) an approved sealant must be used. Sealant to be applied as per drawing, see under.

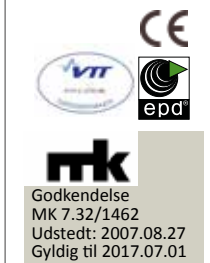

For pipe penetrations, drill out a hole 5 mm larger in diameter than the pipe. Cut surfaces must be cleaned. Use approved pipe penetrations such as Uponor M6 or SanipeX.

## Mounting with standard internal corner profile

Start the installation as shown in the drawing. Adjust the length of the panels to meet the ceiling. Set the internal corner profile onto the panel, then fit both panel and corner profile into place, into the corner.  
**NB! The panels replace water vapour resistant foil on outer walls.**

The panels are fastened plumb at the top. Allow at least 5 mm distance up to ceiling. The inner corner profile is attached to the stud using screws through the pre-drilled holes. Remember to countersink the screws.

Make sure the next panel is plumb and adjusted to fit the next stud. Allow about 2 mm expansion in the inside corner moulding. In wet zones membrane should go up min. 45 mm behind the base profil/panel.

The final panel is folded at one side so that the joint will be neat and is fastened with staples, concealed by ceiling cornices and door architraves.

As the panels may have sharp edges, the use of gloves during assembly is recommended.  
As a filler/sealant we recommend Fibo seal.  
Fibo seal is approved by the norwegian building research institute (nbi) and in accordance with etag 022

2069 S F03 and F05 Zink, 2091 S F01 White

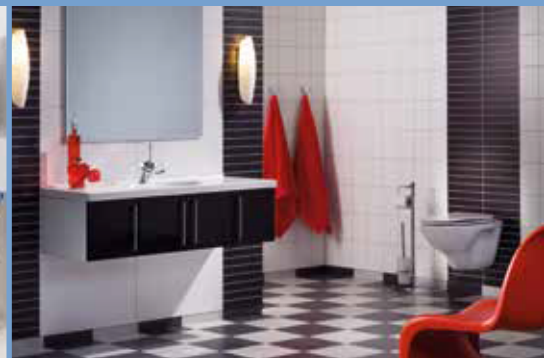

## INSPIRED?

We hope we have given you an idea of the amount of possibilities wall panels from Fibo-Trespo gives you.

Give yourself a great bathroom with atmosphere for relaxing and comfort, without compromising on quality.

The Fibo-Trespo wall panels provide instant water-proof, hygienic walls with a choice from a large range of colours and finishes.
